Eye Health, Vision and subsidised glasses for Refugees and Asylum Seekers - Victoria

The Australian College of Optometry and Victorian Eyecare Service

Healthy eyes and good vision are important to all of us for daily life, education, employment and community and family participation. That is why the Victorian Department of Health, through the Victorian Eyecare Service, provides funding to help people who are disadvantaged or on low incomes to access low cost optometry services and subsidised glasses.

If you are a Refugee or Asylum Seeker, you may be referred to the Australian College of Optometry (ACO) Clinic by a welfare or social support agency. Your Refugee or Asylum seeker status needs to be confirmed by a letter from such an agency. A Medicare card is not required if you have a letter confirming your Refugee status or Asylum seeker status.

If you have a Pensioner Concession Card or Health Care Card you are eligible to attend ACO clinics without a letter confirming your status.

If you have a Medicare card, Medicare covers the costs of most optometry consultations. The Clinic bulk bills consultation fees, so normally no consultation fee is payable by the patient. If glasses are needed, they may be provided at a subsidised rate (starting from $30 - $50).

There are interpreter services available for Refugees and Asylum Seekers if required. You will be placed on a waiting list for an interpreter service and be contacted once an appointment can be confirmed. Please note that there may be longer waiting times for interpreter services.

or telephone (03) 9349 7400 or 9349 7455 (appointments)

Eye Health and Eye Examinations

Vision loss from diabetes, cataract, and refractive error (the need for glasses) is common in communities in Victoria and up to 75% of vision loss is unnecessary as it is preventable or treatable. Regular eye examinations, early detection and treatment of eye problems helps prevent vision loss. An eye examination with an optometrist generally takes about 40 minutes and allows investigation of all aspects of how your eyes are functioning. Your eyes will be tested for eye diseases such as cataract, diabetic eye disease, macular degeneration, glaucoma, dry eye, binocular vision problems (how the two eyes work together) and your glasses prescription. Drops to dilate the pupil are usually used (especially if you have diabetes) to allow the optometrist to check the health of the retina, macula and optic nerve at the back of the eye. These drops sometimes make the eyes blurry for about 2 hours after the eye test. If cataract surgery or laser treatment is needed, the optometrist will arrange a referral to an eye specialist (ophthalmologist) in a public hospital eye clinic (no fees) or you may choose to see a private specialist (private fees apply).
Children’s eye examinations will help to find any eye problems that affect your child’s ability to see clearly and comfortably for near vision and long distance vision.
